Copyright 1999 Rolf Niepraschk, niepraschk@ptb.de

This program can be redistributed and/or modified under the terms of the L^AT_EX Project Public License Distributed from CTAN archives in directory `macros/latex/base/lppl.txt`; either version 1 of the License, or any later version.

This small L^AT_EX package defines the `overpic` environment which is a combination between a `picture` environment and an `includegraphics` command (defined in `graphicx`). The resulting `picture` environment has the same dimension as the included EPS graphic. Now it is easy possible to put any L^AT_EX output above the graphic on defined positions. A grid to aid is also possible.

This directory contains the following files:

`README` – This file.

`README.de` – The same in german.

`overpic.sty` – The definition of `overpic`. Required `graphicx.sty` and `epic.sty`.

`opic-rel.tex`

and

`opic-abs.tex` – Two demos that shows all the features. You need the EPS graphic file `golfer.ps`. This file is part of GHOSTSCRIPT's `examples` directory.

Please send comments and suggestions to niepraschk@ptb.de.

Happy T_EXing...

Changes:

v0.51, 1999/03/02 – New (LPPL) license

v0.52, 1999/07/04 – Correction of wrong height calculation (if `depth` \neq 0)

*This manual corresponds to `overpic` v0.52, dated 1999/07/04.
